INSPECTION FOR:

Jurupa Unified School District

4740 Pedley Road

Jurupa Valley, Ca 92509

PERFORMED AT:

Pedley Elementary

Sky Country Elementary

Granite Hill Elementary School Mission Bell Elementary School

Jurupa Middle School

Sunnyslope Elementary School

Nueva Vista High School

SAMPLE DATE:

April 14, 2018

ACTION LEVEL:

15 parts per billion

DATE

May 2, 2018

Michael P. Cohn

DPH #437

This inspection/ sampling was conducted in conformance with American Water Works Association Guidelines for water sampling. AAA Lead Consultants and Inspections, Inc. utilized state-of-art practices and techniques in accordance with regulatory standards while performing this inspection. AAA Lead Consultants and Inspections, Inc. evaluation of the relative risk of exposure to lead identified during this inspection is based on conditions observed at the time inspection. AAA Lead Consultants and Inspections, Inc. cannot be responsible for changing conditions that may alter the relative exposure risk or for changes in accepted methodology.

LEAD IN WATER REPORT JURUPA UNIFIED SCHOOL DISTRICT 4740 PEDLEY ROAD JURUPA VALLEY, CA 92509

1.0 INTRODUCTION

This report presents the results of AAA LEAD Consultants and Inspections lead in water sampling for seven school sites in the Jurupa Unified School District as identified on the previous page. AAA LEAD Consultants and Inspections, Inc. collected six water samples from each of the school sites including a second draw from one faucet at each site. This document is prepared for the sole use of Jurupa Unified School District, and any regulatory agencies that are directly involved in this project. No other party should rely on the information contained herein without prior written consent of Jurupa Unified School District. The scope of services and results are presented below.

2.0 SCOPE OF WORK

The purpose of this analysis was to identify and assess the presence of lead in water at each of the school campuses and if present, determine the cause and make recommendations to permanently remove the source of contamination.

On April 14, 2018 AAA Lead Consultants and Inspections obtained six water samples from each school site including kitchen sinks and drinking fountains. None of the sinks or fountains had been used since the previous day. A first and second draw was taken from a sink or fountain at each site followed by a first draw at four other locations on each campus.

3.0 PROPERTY DESCRIPTION

Each school site was unique in age and size. Most campuses had a cafeteria or food service area where some first and second draws were taken. At some schools a first and second draw were taken from high traffic fountains.

4.0 INSPECTOR'S QUALIFICATIONS

Mr. Michael Cohn of AAA LEAD Consultants and Inspections performed the water collection at the site using sterile collection containers with HNO₃ (nitric acid as a preservative) to obtain the water samples. Mr. Cohn has taken water sampling classes offered by the American Water Works Association. Mr. Cohn is certified by the California State Department of Health Services as an Inspector for Lead Based Paint. Project Monitoring, Project Supervision and Project Design.

5.0 METHOD OF TESTING

The samples were drawn into two pint water collection bottles and were sealed. The samples were taken to a State of California Department of Health Services accredited Laboratory for water analysis by EPA approved method 200.8. "Standard Methods for the Examination of Water and Wastewater 1992, 18th Edition", published by the American Public Health Association.

6.0 SUMMARY OF RESULTS

Five of the seven schools results were non-detect for the presence of lead in water. Two of the schools, Pedley Elementary School and Nueva Vista had both had locations with detectable levels of lead. The sample that contained lead at Pedley Elementary School was H²0-5, the kitchen sink with a value of 5.4ppb. The two locations at Nueva Vista that were identified to contain lead were Sample H²O-1, the exterior fountain at the administration building with a value of 6.8ppb, and the sink in Room 16, Sample H²O-2 with a value of 43ppm. The sample is Room 16 exceeds the Federal Standard for Lead in Drinking Water which is 15 parts per billion.

7.0 CONCLUSIONS

Although the sample taken at Pedley Elementary School kitchen sink was below the Federal Standards for Lead in Drinking Water, it is our recommendation this faucet should be replaced with new fixtures which does not contain lead. One of the locations at Nueva Vista (the exterior admin drinking fountain) that indicated a presence of lead was within the Federal Standards for Lead in Drinking Water. The second location, Room 16 sink, was well above the Federal Standard of 15ppb and should be taken out of commission immediately until it can be replaced with a lead free faucet.

8.0 REPORT LIMITATIONS

AAA LEAD Consultants and Inspections planned, developed and implemented this water sampling based on AAA LEAD Consultants and Inspections previous experience in performing lead in water sampling. This drawing of samples was conducted in conformance with American Water Works Association guidelines. AAA LEAD Consultants and Inspections utilized state-of-the-art practices and techniques in accordance with regulatory standards while performing this sampling. A copy of personnel certifications has been provided for your review. AAA LEAD Consultants and Inspections evaluation of the relative risk of exposure to lead identified during this sampling is based on laboratory analysis. AAA LEAD Consultants and Inspections cannot be responsible for changing conditions that may alter the relative exposure risk or for future changes in accepted methodology.
